

Blogging on Military Embedded Systems

Blogging is easy and can be fun! When you're ready to blog, contact Editorial Director John McHale (jmchale@opensystemsmedia.com) to consult on topic development and learn John's blog guidelines.

You can pick any topic that would be of interest to a design engineer working on a military electronics application. Keep in mind that you can't write a promotional blog your own company and/or its products, but a company mention is at times acceptable. You can blog as often as you would like.

Blogs appear on the web site (which is a great for SEO) plus they *may* also be appear in one of E-newsletters ([Radar/Electronic Warfare](#), [CyberDefense Report](#), [Military E-letter](#), [Avionics Design](#)).

You may also blog on our PICMG, VITA, and Small Form Factors websites as well.

Here is a link to our recent blogs:
